SMC distribute to the DAACs, PVC and VATC.

INSTALLATION:

This problem occurs at EDC, other DAACs may take this TE as required.

NOTE: This TE 5B.05_INGEST.03 is to be used in place of the obsolete TE 5B.05_INGEST.02 and .01.
Discard any INGEST.01, and .02 files and TAR files.

This TE can be loaded over Ingest installations of 5B.03 or 5B.05. When you install 5B.05C you must reload this TE or you will lose these fixes.

NOTICE: !!!!!This TE has 2 sets of Tar files - one to be used with sgi6n32 installs and one to be used with IRIX65 installs!!!!!!
Pick the required TAR file either for sgi6.2 or for IRIX6.5 OS.
Untar and move files to staging areas

On the INGEST Platform (xxicgxx) go to the dbms directory
cd /usr/ecs/<MODE>/CUSTOM/dbms/INS

Copy down the staged files

```
cp /<staging_directory>/<5B.05_INGEST.01>/* .
```

Determine the current database version level. Execute the following commands:

```
isql -S<ingest_sql_server_name> -U<dbo_name> -P <password>
use ingest_<mode>
```

ORIGINAL

go

select * from EcDbDatabaseVersions where EcDbCurrentVersionFlag n= "Y"

go

Record the current db version

Using ECS Assist SubSystem Manger apply the new database patch

Apply patches as required - remember that the db patches must be applied in numerical order.

The last 5B.03 Ingest db patch was #43 Thus if INGEST in <mode> is at patch 43 you must install patch 44, then 45, and 46,47,48, 49, 50, 51 and then 52.

NOTE: If the mode is currently at db patch #50, then you only need to add #51 and 52.

NOTE: also remember to replace the previous EcInGran file(s) in each mode with the EcInGran file provided with this TE. You must select the proper sgi version (the sgi6n32 version of the IRIX6.5 version).
